

Bria Bridges, Business Management, and Dunamis Bacchus, Computer Science, were awarded an \$8,087 grant from Google. These students are also two of the co-founders of Aggie Innovation Network and the Maker-space in the Library, partnered with the College of Science and Technology to follow their vision of interdisciplinary collaboration to make this possible. They are collaborating with student, Anna Tapia, Biology and faculty Dr. Gregory Goins. The project goal is to develop a revolutionary system to automate and modernize the farming experience, from the rural to the urban setting. Also included in this grant is an opportunity to mentor local high school students in FIRST robotics with the assistance of Dr. Kory Bennett from the College of Engineering.
