

Tips on Axis in Eclipse

In Eclipse, when your project is complete, right click the project name and select **Export**. In the resulting window, the contents of the **Web module** text box will default to the name of the project. For the **Destination** text box, browse to

`TOMCAT_HOME\webapps`

(not all the way down to `ROOT`).

Next, open your browser, and, in the address bar, put

`http://localhost:8080/<WAR file>`

You then see a link as for a folder. Click it. Then you see more links as for a folder, but these are for services. Select the one you want.
